JVCKENWOOD delivers professional digital radio systems to the National Police of Ukraine Through the United Nations Office for Project Services (UNOPS)

JVCKENWOOD Corporation (JVCKENWOOD) hereby announces that its professional digital radio systems have been delivered to the National Police of Ukraine and installed through the United Nations Office for Project Services (UNOPS).

■ Background for the Delivery of Professional Digital Radio Systems

Since the outbreak of conflict in eastern Ukraine in 2014, the Japanese government has been providing various forms of support to Ukrainians suffering from the crisis through international organizations. This announcement is part of that effort. The professional digital radio systems that have been delivered will be deployed in Sumy Oblast, which is located along the eastern border of Ukraine. These radio systems will enable highly secure communications compared to the analog radio systems that were previously used.

JVCKENWOOD will continue to contribute to enhanced security and public safety in various countries by providing high-quality and reliable professional digital radio systems.

■ Communications Systems Business

Large-scale disasters and disputes have occurred in recent years in various parts of the world. Professional radio systems are critical to provide safety and security to people in situations involving human life, such as those of police, fire fighting, and emergency services.

JVCKENWOOD's Communications Systems Business combines wireless technology developed over the years with cutting-edge digital and network technology. We provide highly reliable professional radio systems globally to the public safety market (including police, fire fighting, and emergency services), to the public service market (utility providers and so on), and to the private sector market (hotels, retailers, and so on). By doing so, we have captured a strong market share.

■ Future Initiatives

JVCKENWOOD is working to transform into a Customer Value Creator that solves problems facing customers based on our corporate vision of “Creating excitement and peace of mind for the people of the world.” We aim to provide new value and services to customers by utilizing big data and the latest digital technologies such as AI and the IoT, applying open innovation in addition to the technological assets the Group has developed over the years.

Furthermore, we place importance on promoting sustainability activities through our business activities. By actively participating in various support activities both in Japan and overseas, such as the Japanese government-led Official Development Assistance (ODA), we will strive for sustainable growth and improved corporate value, and contribute to the development of a sustainable society.
